

T1A3 Portfolio Website

Tessa Peterson

Where to start?

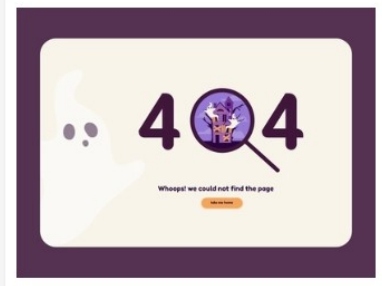

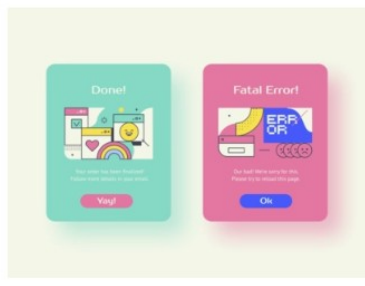

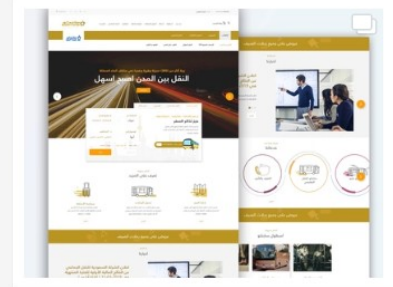

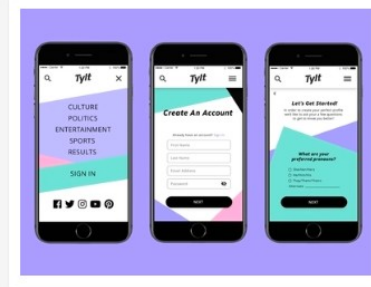

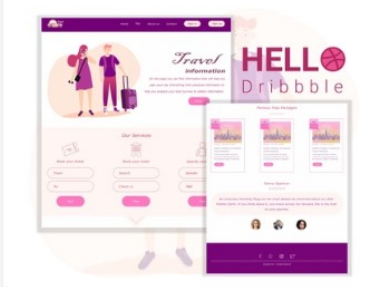

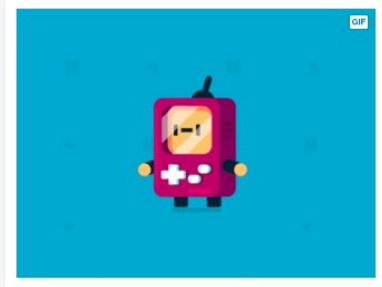

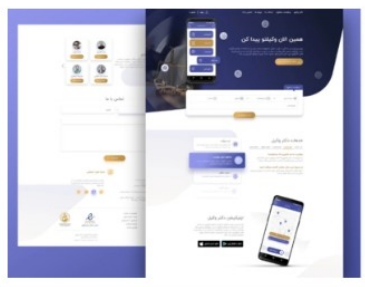

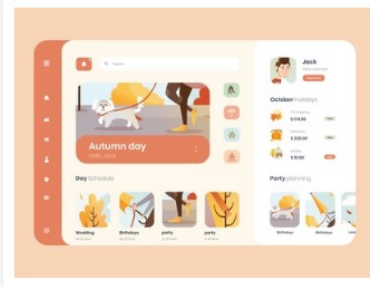

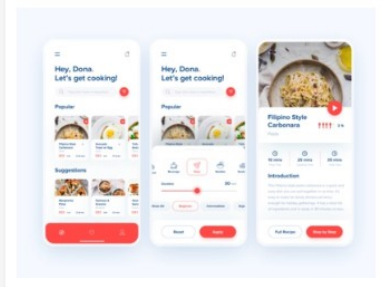

- Getting back to my roots
- The place I first started coding...

Inspiration

- Neopets
- (Specifically, the old style Neopets layout)
- Recreate a similar feel but prettier and more modern

Portfolio

Tessa Peterson | September 21, 2019

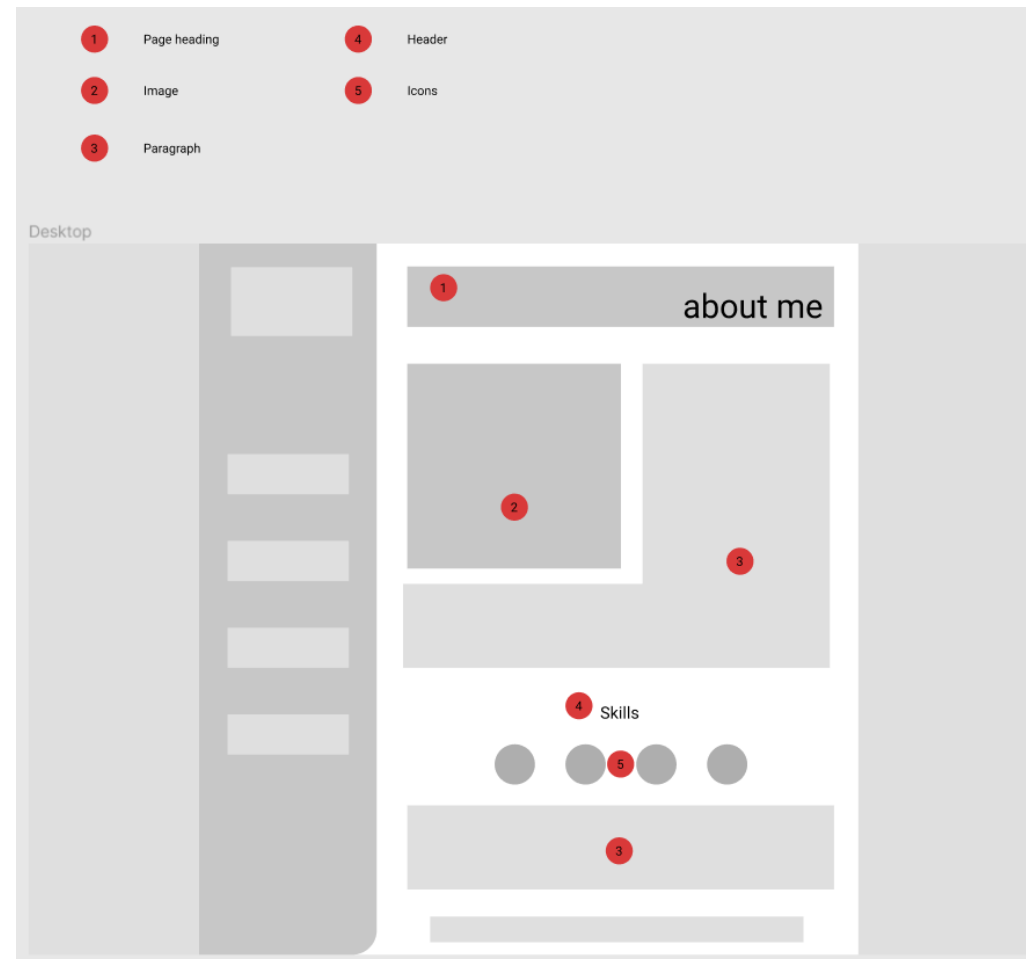

Features

- Index page
- Column layout like the old Neopets index page
- Main heading looks like the Neopets header

Features

- About page with profile pic, description and list of tech skills
- Page header also resembles the old Neopets headers

Features

- 1 Page heading
- 2 Text
- 3 Link
- 4 Header
- 5 Icons

Desktop

1 history

2

Caption: Bailey, asleep, somehow.

Cats are great

Posted on 20 Sept 2019

Aren't cats good? They can curl up like pretzels and still be comfortable somehow. I found Bailey sleeping like this earlier. Isn't it cute? Cats are ridiculous.

SumoBot

A robot designed for "fighting" in a circular arena, with the intention of pushing an opponent out of the ring without being pushed out itself. The robot was designed, built and programmed by me. It looks a bit messy, but it worked!

The robot makes use of multiple sensors to detect objects and arena boundaries. Primarily ultrasonic sensors are used for object detection in multiple directions, and line sensors on each edge of the robot detect the arena boundary. Differential steering is used to control the robot.

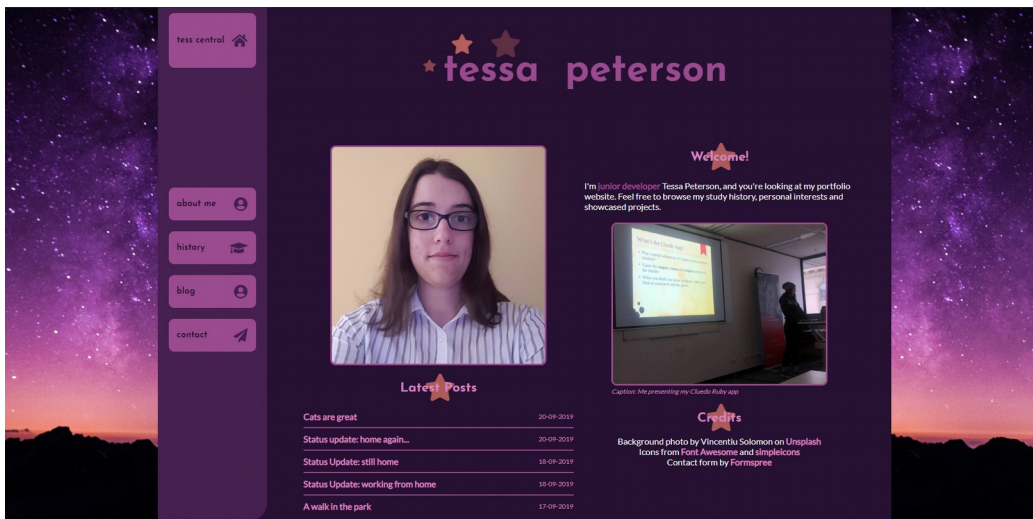

Technologies used: Arduino

- List of blog posts with links to individual posts
- Button-style links (some with icons)
- Info container for projects
- Small bordered image (marked with icon) that links to full size image

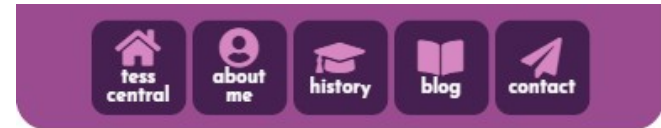

Variations

- Orange version
- Dark version
- “Classic” version

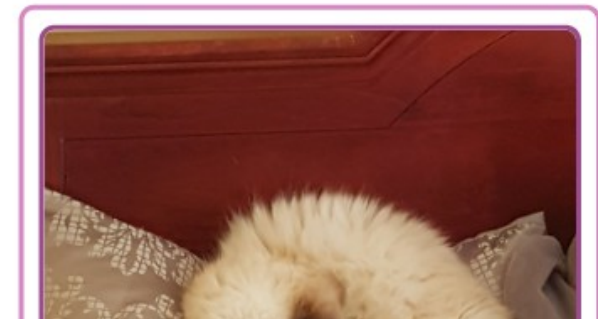

Variations

- Mobile version
- Nav bar is now at the top
- Some adjustments to component sizing/positioning
- Tablet version also exists
